

# RW-001 RoadWatch™ IR Road Surface Temperature Sensor

Icy roads can be hazardous any time of year, and it can be almost impossible to tell whether a road is icy, or merely wet. Which is why if you do any mountain or winter driving, RoadWatch™ is an absolute necessity for safe driving.

RoadWatch™ uses IR technology to detect the actual surface temperature of the roadway, easily and reliably detecting icy conditions. Your VMS™ boldly reports the temperature so you can adjust your driving appropriately. As an added bonus it also reports the ambient outside air temperature.

RoadWatch™ mounts easily under the coach, requiring only a clear view of the road surface. Installation requires just four wires. All readouts are selectable for metric or standard units. It is compatible with all VMS models, and can be used in combination with any and all SilverLeaf accessories.

## Features

Road Surface Temperature

Ambient Air Temperature

## Specifications

		<u>VMS Models</u>	<u>Software Version Req'd</u>
<b>Dimensions</b>		VMS 120	20RV00 or higher
Control Module	4.0" x 2.1" x 1.2"	VMS 200	11RV02 or higher
Sensor	4.5" x 2.5" x 1.4"	VMS 320	20RV00 or higher
<b>Power Requirements</b>	< 50 mA 12VDC	VMS II	20RV00 or higher
